

Day 15

M T W T F S

27/08/24

- 1- Contingency table
- 2- Hexagonal binning
- 3- Contour plot
- 4- Violin plot

⇒ Contingency table:- A tally of counts between two or more categorical tables.

	Finance	285	257	286	296
	Marketing	268	304	283	271
	Office tools	304	286	285	264
	Programming	279	252	266	279
	Technology	256	272	269	276

Note I retrieve this table from my Day 15 file on Kaggle there applied contingency-table.

⇒ Hexagonal binning:-

A plot of two variables with the records binned into hexagons.

⇒ Scatter vs Hexagonal binning:-

Scatter plot is for small data and hexagonal binning is for large data.

⇒ Contour plot:- Contour plot is used to plot 2D ^{Circles} lines ~~to~~ which shows the density of the plots in that area.

Seaborn is better option for contour

⇒ Violin Plot:- It is an enhancement to the boxplot and it plots the density estimate with the density on the y-axis.
